WORLDWIDE DELIVERY!

MOBILITY AND TRACTION

RoadRunner OTR tires are engineered with a large footprint that provides even load and minimizes unit ground-bearing pressure.

DURABLE CONSTRUCTION

Strong sidewalls and steel belts under the tread resist cuts, snags and punctures.

QUALITY COMPOUNDING

RoadRunner tires use high quality compounds that meets and exceeds industry standards and expectations.

ROADRUNNER is there for the long haul. Hauling is more than just extracting minerals from the Earth and making the delivery. Efficient haulage helps extract the most from your business and can deliver in productivity, lower costs of operation, and throughput.

The road from hauler to customer is usually tough on your operations. Bad weather, challenging conditions, and rising operational costs are the realities of business. ROADRUNNER understands this and offers product performance, reliability, and support to help you meet those realities with quality and hardworking tires.

Strong, reinforced sidewalls help resist cuts and snags; tread material helps provide optimum wear in a variety of operating conditions. The steel-belted construction promotes low rolling resistance, which is critical for fuel economy and maintaining good treads.

ROADRUNNER tires face some tough challenges in some of the toughest work environments in the world. That is why we offer a wide range of BIAS and Radial tires for the mining, earthmoving, industrial, port, trucking and farming industries because we are there for you over the long haul.

GREAT TIRES! GREAT PRICES!

MOBILITY AND TRACTION

RoadRunner OTR tires are engineered with a large footprint that provides even load and minimizes unit ground-bearing pressure.

DURABLE CONSTRUCTION

Strong sidewalls and steel belts under the tread resist cuts, snags and punctures.

QUALITY COMPOUNDING

RoadRunner tires use high quality compounds that meet and exceed industry standards and expectations.

WHY CHOOSE ROADRUNNER?

ROADRUNNER Earthmover and Industrial tires, is specifically designed and manufactured to excel in all work environments, from soft sand to tough shot rock, installed on equipment like wheel loaders, dozers, scrapers, cranes, graders, haul trucks, bottom dump trucks, articulated dumpers, compactors, telescopic handlers, underground equipment and industrial machines such as straddle carriers, forklifts and terminal tractors.

In most cases, the terms "OTR tires" and "earthmover tires" can be used interchangeably. While every major tire manufacturer makes tires designed to be used off the road occasionally, and farm tires are designed to be used off the road at all times, only certain tires are true off the road tires. Such tires are generally made for use on equipment used in surface mining, underground mining, quarries, ports and terminals, construction and industrial applications.

Whether you use them above or below ground, on mud, sand or gravel, ROADRUNNER OTR tires are designed for outstanding performance and long life. ROADRUNNER are rugged tires for surface and underground mining, quarry, ports, highway, construction, and industrial applications that provide the following benefits:

- Long tire life
- Increased resistance to punctures, cuts, and tears
- Exceptional traction on all type of surface
- Low rolling resistance provide efficient fuel economy
- Smooth ride and operator comfort
- Low overall operating cost

GREAT TIRES! GREAT PRICES!

Tire Construction

MOBILITY AND TRACTION

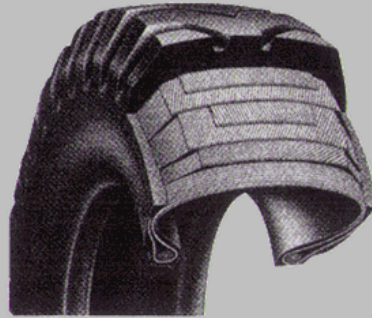

RoadRunner OTR tires are engineered with a large footprint that provides even load and minimizes unit ground-bearing pressure.

DURABLE CONSTRUCTION

Strong sidewalls and steel belts under the tread resist cuts, snags and punctures.

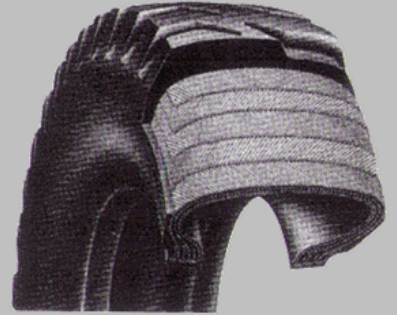

QUALITY COMPOUNDING

RoadRunner tires use high quality compounds that meets and exceeds industry standards and expectations.

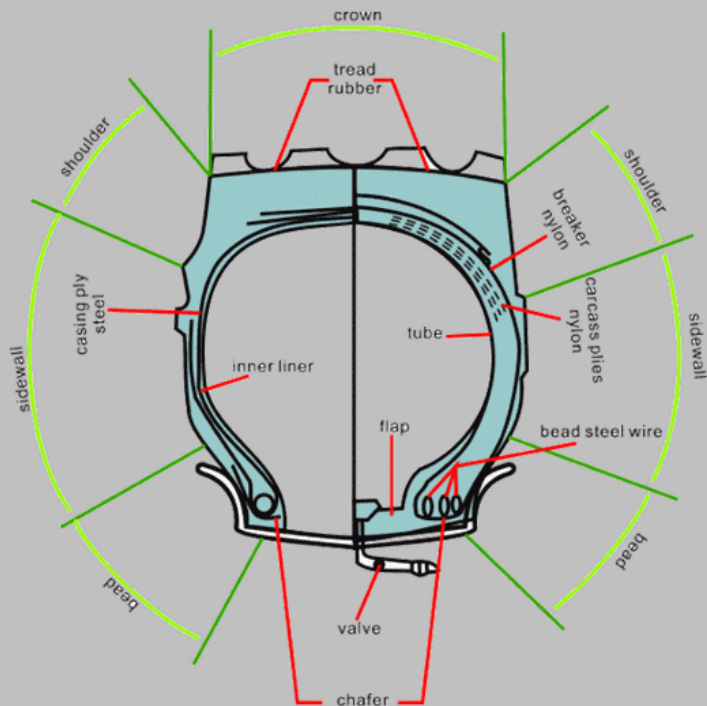

OTR RADIAL TYRE

Excellent high speed application.
More resistance to heat build up.
Increased resistance to punctures/flats.
Capable of carrying greater loads.

OTR BIAS TYRE

Greater machine stability.
More suited to slow speed for heavy loading applications.
Excellent overall durability.

MOBILITY AND TRACTION

RoadRunner OTR tires are engineered with a large footprint that provides even load and minimizes unit ground-bearing pressure.

DURABLE CONSTRUCTION

Strong sidewalls and steel belts under the tread resist cuts, snags and punctures.

QUALITY COMPOUNDING

RoadRunner tires use high quality compounds that meet and exceed industry standards and expectations.

BIAS TIRE

- ✓ *High Strength Casings*
- ✓ *Tough Tread Compounds*
- ✓ *Full Range Of Tread Designs*
- ✓ *World Wide Delivery*
- ✓ *Special Bulk Rate Pricing*

BIAS TIRES TO HELP GET YOU THROUGH THE TOUGH CONDITIONS

ROADRUNNER's bias tires, can perform in a wide range of conditions from soft underfoot settings to severe shot rock environments. The thick nylon casing helps resist cuts and bruises, and provides superb potential for retreading.

BIAS BELTED TIRES CONSISTANTLY GET THERE

ROADRUNNER's bias/belted tires are constructed using high quality nylon plies. The casing provides a firm tread area which helps reduce squirm and help increase puncture resistance.
